

CULTURAL INSTRUCTIONS

LAVENDER 'GOODWIN CREEK GREY'

LIGHT: To keep its lovely silver coloring and to produce spikes of dark blue flowers from spring to fall, this Lavender demands a sunny south window indoors. It will also grow well under fluorescent light stands.

TEMPERATURE: Daytime temperatures of 60–75°F are fine indoors. In fall and winter, place your Lavender where the nighttime temperature falls to 60°F or even cooler.

WATERING: Like most silver-leaved plants, Lavender is accustomed to growing in very dry, lean soil. Water only when the top inch of the potting mix is dry to the touch.

FERTILIZER: Fertilize no more frequently than once every 6 weeks during the growing season (April through September).

CONTINUING CARE: Lavender 'Goodwin Creek Grey' would be pleased to spend summer outdoors in a sunny location—either in a pot or in the ground. If you live in Zone 7 (0°F) or warmer in the West, you can grow it outdoors year-round. In colder climates, bring the plant back indoors before frost. (Lavenders falter in the torrid summers and mild wet winters that are common in the South. If you summer your plant outdoors, keep it in a pot and bring it back indoors for the winter.)

OUR GUARANTEE

Behind the pages of our catalogues stand several dozen careful and competent professionals who are determined to make your gift successful in every respect. We guarantee complete satisfaction, or your money back.
