Growing Argyranthemum (Marguerite Daisy)

**Latin Name Pronunciation:** ar-jer-an'theh-mum

A group of annual, summer-flowering Daisies that bloom long and hard on bushy, mounded plants with lacy foliage that sets off the flowers to perfection. A good size and habit for mixed borders or container growing, and a carefree disposition that needs only an occasional deadheading or pruning to look its best and encourage rebloom. Give them full sun and plant in average garden soil.
