Growing Muscari bulbs

**Latin Name Pronunciation:** mus-kar’-ee

Bulb size: 8-10 cm

Grape Hyacinths (Muscari) are easy to grow in well-drained soil. If left undisturbed, the blue-flowered varieties multiply rapidly. Bulbs often send up grasslike leaves in fall. This growth is normal and should not be cut or mowed off until browned by frost. Great for forcing. It is not unusual during storage for blue-green penicillin mold to grow on the surface of Muscari bulbs. The mold does no harm, and it dies as soon as you plant the bulb. If the bulb is firm, you can plant with confidence. Space them 2–3” apart and 2–3” deep.
